Summary

In my 15 years of working in IT, I have been exposed to a variety of customers, tools, and technologies. My recent years have been focused on supporting Linux, and surrounding technologies, for federal customers. I love solving problems and I especially love solving problems with automation. Ansible is one of my favorite tools to use for its versitility and agentless design. When a customer presents a problem, I understand the importance of listening to their needs to identify the appropriate technological solution.

Competencies

- Operating Systems - Windows Server, Redhat, Ubuntu Linux provisioning, patch management, networking, and decomissioning on physical and virtual platforms like VMware and KVM.
- Automation - Bash scripting, Powershell scripting, Ansible, Group Policy Objects
- Technical Support - Customer service, troubleshooting/problem solving, soft skills.
- Identity management - User and group management with Active Directory. Linux integration with Active Directory through System Security Services Daemon(SSSD).

Education

- Savannah College of Art and Design. Bachelor of Fine Arts, 2004 Savannah, GA
 - Major: Computer Art 3D
- Linux Academy Linux+LPIC 101, Linux+LPIC 102

Certifications

- Redhat Certified System Administrator 200-026-953 RHCSA EX200, 03-04-2020
- CompTIA Linux+ LX0-103 exam, 11-09-2015, COMP001008569386
- CompTIA SY0-301 Security+ Certification, 2014 #COMP001008569386
- CompTIA 2007 A+ Certification, 2009 #COMP001008569386

Experience

General Dynmics Information Technology, Sept 2025 - Present

- Linux System Administrator
 - Supported security customers by making compliance adjustments

- Collaborated with database administrators to configured operating system prerequisites for OS migration
- Coordinated between database administrators and developers to schedule downtime for approved changes
- Gained a deeper understanding of Ansible inventory management, as well as, playbook writing techniques
- Applied monthly operating system patches

Freelancing/Training, 2025

- Git
- Python
- Docker
- AWS
- Blender

Abacus Solutions Group, 2021

- Linux System Administrator
 - Built Ansible infrastructure complete with playbooks, roles, tasks, and managed inventory file.
 - Deployed systems on VMware on appropriate SAN storage. Installed and configured guest specific software using Ansible roles.
 - Used ansible to automate software installations, performed system upgrades, gather system information for reporting
 - Applied STIGs(Security Technical Implementation Guides) to Red Hat systems for hardening.
 - Used bash scripts to automate tasks
 - Configured SSSD(System Security Services Daemon) to allow for Active Directory login on Linux systems.
 - Foreman, Katello, Red Hat Satellite for additional monitoring and license management
 - Updated certificates for nginx reverse proxy front-ends
 - Utilized logical volumes to separate system partitions and optimize storage.
 - Migrated Red Hat 7 systems to Red Hat 8.
 - Created Documentation(SOPs) for Linux specific hardening and maintenance routines.
 - Created tickets with software and hardware vendors (Redhat, Dell) to extend knowledge on vulnerabilities and fix hardware failures.

Glynn County Board of Commissioners, 2014

- System Administrator

- Experimented with Ansible for configuring Cisco devices and managing Windows Servers
- Wrote Powershell scripts to automate onboarding/offboarding of endusers
- Resolved complex identity management and access issues for 500+ internal users
- Used Group Policy for domain device and user settings
- Restored files from backup(Backup Exec)
- Installed and configured servers (Milestone camera servers, file servers)
- E-Discovery for open records requests
- Setup policy server for negotiating enterprise wireless connections and Cisco device authentication

Glynn County Board of Commissioners, 2010

- IT Service Specialist
 - Provided on-site and remote technical support to end users
 - Established communication with the customer to get an accurate understanding of the problem.
 - After resolution, I train end-users on how I solved the problem should it re-occur.
 - Imaged computers for deployment following security baseline
 - Configured network printers
 - Terminate CAT 5&6 cables for wall-jacks and various other use cases
 - Terminated fiber cable
 - Configured cisco switches and routers for initial setup
 - Network troubleshooting
 - Applied the OSI model problem solving approach to re-establish LAN connection
 - Modified network topology nodes with What's Up Gold software
 - Supported audio and video for County commissioner livestreams.

Radiant Systems, November 2009-November 2010

- Computer Repair Technician
 - Repaired and rebuilt point-of-sale computers
